## Frictional Connections Product Catalogue

Certified to  
DIN ISO 9001:2015

# STÜWE<sup>®</sup>

## FRICTIONAL CONNECTIONS – EQUIPMENT THAT CONNECTS

## High Performance

- Safe transmission at torques of up to 18 000 000 Nm
- Suited for shaft diameters from 8 mm up to over 1 000 mm
- Quick and easy, space-saving installation and non-destructive removal
- No frictional corrosion
- Compact design
- Normal surface qualities of shafts & hubs
- May be used as an application-related assembly
- May be fastened using bolts or hydraulic systems

## The Benefits

STÜWE® frictional connections can be easily and non-destructively installed and removed – unlike friction-type connections which are joined either thermally or by other means. The clearance fits between a shaft and hub or between a hub and a “STÜWE® disc” enable easy installation and removal. Renowned companies throughout the world appreciate the benefits of our products.

## Certified Quality

You are guaranteed a top-class service from us not only through our highly-qualified employees but also due to our state-of-the-art production facilities and consistent optimisation of our operating processes.

As an ISO 9001-certified company, we have everything under control, from the goods-inwards inspection of our materials up to the final inspection of our precision products. The latest inspection procedures and, not least, great care guarantee you a consistently high level of quality, safety and service life for each and every frictional connection. On request all STÜWE® products may be supplied with marine classification inspection.

## Company Description

STÜWE® GmbH & Co. KG, located in Hattingen in the Ruhr district of Germany, is a globally leading manufacturer of frictional shaft-hub connections. We develop and produce top-quality, highly specialised frictional connections for especially demanding applications. Renowned companies throughout the world appreciate the benefits of our products and have placed their trust for many years in our expertise and the long service life of our products. That binds us in our common goals. Shrink discs, locking units, shaft couplings, flange couplings, cardan shaft couplings and special customised products form just a fraction of our company’s comprehensive product portfolio.

Benefit today from powerfully-driven equipment that is Made in Germany.

## AREAS OF APPLICATION

STÜWE® frictional connections are versatile in their use. They can be used in practically all powertrains and in many other applications. The individual sizes range from just a few mm up to more than 1 000 mm, with transmission torques of a few Nm up to more than 18 000 000 Nm.

### Belt drives

- Flange coupling for the connection of a gear motor with a drive shaft

### Marine drives

- Locking units for main engine couplings and shaft couplings in marine drives

### Crushing equipment

- A shock-resistant connection between the motor and rollers in crushing equipment

### Wind turbines

- Shaft-hub connection on the slow and quick sides in wind turbines

### Rolling mill equipment

- Suited for alternating torques and impact loading in reversing operation of a rolling mill

### Test beds

- Possible applications in test bed equipment, also with hydraulic tensioning

### Further areas of use:

- Fixing of brake discs
- Fixing of slip-on gears to a shaft
- Fixing of couplings in such as printing presses, agitators
- Axial fixing of mechanical seals
- Fixing of paddle wheels in tailings facilities
- Fixing of water wheels
- Fixing of flywheels
- Fixing of shafts in such as weaving machines or other precision mechanics applications

## TECHNICAL SPECIFICATIONS

$$M_t^{\text{red}} = \sqrt{M_{t, \text{list}}^2 - \left( \frac{d_w \cdot P_{ax}}{2} \right)^2}$$

### Maximum transmissible torque $M_t$

The transmissible torque or the transmissible axial load is dependent on the coefficient of friction in the compression joint transmitting the load, the fitting tolerance, the clamping length and the shaft diameter. The catalogue value is based on an assumed coefficient of friction, the maximum possible fitting tolerance and  $P_{ax} = 0$  for a given shaft diameter and for a solid shaft.

### Coefficient of friction

The coefficient of friction of dry and grease free surface (steel/steel) ranges from 0.15 to 0.33. The transmissible torques of the external locking STÜWE® discs are calculated using a value of  $\mu_w = 0.15$ .

Calculations may be made using higher coefficients of friction where there is special surface treatment. In addition, the surfaces must be carefully de-greased. Coefficients of friction of about  $\mu_w = 0.2$  are achieved. The transmissible torque can thus be increased accordingly.

### Fit clearance

The torque calculation takes into account the maximum fitting tolerance and surface roughness. If the actual fitting tolerance is tighter, then the transmissible torque consequently increases. On the other

hand, the transmissible torque reduces if the fitting tolerance is larger than that given in the catalogue.

### Shaft diameter

The shaft diameter range for every frictional connection is specified in the product tables. If a shaft diameter is selected which is between two given values, the transmissible torque may then be found with sufficient accuracy by interpolation. (Larger shaft diameters can be chosen if hub material permits. The transmissible torques can be extrapolated.

### Axial load „ $P_{ax}$ “

The maximum transmissible axial load (for  $M_t = 0$  Nm) may be calculated from the maximum transmissible torque (for  $P_{ax} = 0$  kN):

$$P_{ax, \text{max}} = M_{t, \text{list}} \cdot \frac{2}{d_w}$$

### Transmission of torque combined with axial load

If torsional and axial loads are to be transmitted simultaneously, use the following equation:

$$M_t^{\text{red}} = \sqrt{M_{t, \text{list}}^2 - \left( \frac{d_w \cdot P_{ax}}{2} \right)^2}$$

$M_t^{\text{red}}$  is the torque reduced by axial load  $P_{ax}$ .

## TECHNICAL SPECIFICATIONS

### Hub material

Steel, cast steel or nodular cast iron with a yield strength of at least 360 N/mm<sup>2</sup> can be used as material for a hub. On assemblies which also have to transmit also bending moments (rotating bending) the hub should be of heat-treatable steel like 42CrMo4 or higher quality cast steel or nodular cast iron.

Grey cast iron can be used for assemblies where negligible bending moments occur. The hub thickness must be selected to be greater than normal in such cases.

### Material

All frictional connections are offered in 42CrMo4 as standard. In addition, our products are

available in 1.4122 and in 1.4462. It must be noted that in these cases other torques may be transmitted. Depending on the combination of materials, an inspection by our Design department will be necessary.

### Surface quality

The surface roughness (Rt) of the shaft and hub should be below 16 µm (turning on a lathe is sufficient).

### Lubricant

Conical surfaces are greased with a MoS<sub>2</sub> lubricant (a combination of bonding coating and paste). The locking bolts are lubricated with bolt lubricants ( $\mu=0.1$ ).

### Locking bolts

All units are equipped with commercial available hexagonal bolts DIN EN ISO 4014/4017, quality 10.9 or 12.9. More exact specifications may be found in each of the tables for a particular type.

Alternatively, hexagonal socket head bolts to DIN EN ISO 4762 may also be used and ordered.

From a locking bolt size of M16 upwards high-strength washers are additionally used.

# ARRANGEMENT AND CALCULATION

## (Two-part) Shrink Disc Type HSD – mechanical

When tensioning the shrink disc, multidirectional stresses occur in the hub. Tangential and radial stress can be calculated by using the following equation for the thick-walled pipes (axial stress can be neglected). Maximum stress occurs on the internal fibre of a hub

Comparative stress can be calculated using the maximum distortion energy theory:

$$\sigma_v = \sqrt{\sigma_t^2 + \sigma_r^2 - \sigma_t \cdot \sigma_r + 3\tau^2}$$

Pressure  $p_w$  determined by means of equation (with the maximum transmissible torque  $M_t$ ).

$$p_w = \frac{2 \cdot M_t}{\pi \cdot d_w^2 \cdot l \cdot \mu_w}$$

## ARRANGEMENT AND CALCULATION

### Internal Locking Unit Type IS

The hubs are expanded due to the pressure of the locking units. So that no plastic deformation occurs as a result of the expansion, the external diameter of the hub  $D_N$  must be selected to be of a sufficiently large size. The following conditional equation derived from the equation for thick-walled pipes under internal pressure can be used to calculate the outside diameter with sufficient accuracy:

When type IS locking units are used in hollow shafts, the following format which can be derived from the equations for thick-walled tubes may be used for the determination of the maximum permissible drill hole size  $d_i$  in a hollow shaft:

$$d_i \leq d \cdot \sqrt{\frac{\sigma_{0.2S} - 2 \cdot p_s \cdot C}{\sigma_{0.2S}}}$$

The hole diameter  $d_i$  can be increased by the use of a supporting sleeve.

$$D_N \geq D \cdot \sqrt{\frac{\sigma_{0.2N} + p_N \cdot C}{\sigma_{0.2N} - p_N \cdot C}}$$

#### Whereby

- $\sigma_{0.2N}$  Yield strengths of the hub
- $p_N$  hub bore pressure
- $C$  is a factor which takes into account the width of the hub over the locking unit

**C = 1** for hubs which are as wide as the locking unit

**C = 0.6** for hubs which are twice as wide as the locking unit

Regardless of the hub width, the yield strength of the hub material should always be higher than the applied pressure  $p_N$ .

STÜWE®

# SHRINK DISC TYPE HSD – MECHANICAL

# SHRINK DISC TYPE HSD – GENERAL INFORMATION

## Application Description

Shrink discs are detachable machine elements for the connection of a hub to a shaft. The two-part path-controlled frictional connection is maintenance-free and dirt-resistant due to its press fit and is very versatile in its use. The cost-effective and high-quality mechanical shrink discs are supplied by STÜWE® in many different variants.

## Areas of Use

Driveline  
technology

Steel- &  
rolling mill equipment

Crushing  
equipment

Conveying  
equipment

Agitation &  
mixing equipment

Wind turbines

# SHRINK DISC TYPE HSD – SERIES

Description	Shaft diameter	Transmissible torque	Features
HSD 20	20 - 250 mm	0.15 - 18.3 kNm	Low torques
HSD 21	110 - 730 mm	16 - 4033 kNm	Average torques
HSD 22	9 - 1050 mm	0.02 - 16493 kNm	High torques
HSD 23	100 - 1050 mm	26 - 19684 kNm	Very high torques
HSD 81	38 - 1050 mm	1.5 - 19958 kNm	As series 22 but with 20 - 30 % higher torque capacity
HSD 83	100 - 1050 mm	30 - 23811 kNm	As series 23 but with 20 - 30 % higher torque capacity
HSD 20 - 1.4122	20 - 250 mm	0.08 - 9.14 kNm	Low torques, rust-and acid-proof
HSD 20 - 1.4462	20 - 250 mm	0.06 - 6.84 kNm	Low torques, rust-and acid-proof

All types may be protected against environmental influences by zinc and nickel coating or by a paint which has an appropriate corrosion protection class. We are able to achieve both desired colours which conform with the RAL colour range and products with lubricants in accordance with NSF H1. More detailed information on this may be found in this catalogue on page 151.

# STÜWE® Shrink Disc Type HSD Series 20

## Code

- $M_t$  Maximum transmissible torque of a shrink disc for  $P_{ax} = 0$
- $P_{ax}$  Maximum transmissible axial load of a shrink disc for  $M_t = 0$
- $M_a$  Required tightening torque of the locking bolts (see also "Installation and Removal Instructions")

Dimensions  $H_1$  and  $e$  apply to untightened units.

# STÜWE® Shrink Disc Type HSD Series 22

## Code

- $M_t$**  Maximum transmissible torque of a shrink disc for  $P_{ax} = 0$
- $P_{ax}$**  Maximum transmissible axial load of a shrink disc for  $M_t = 0$
- $M_a$**  Required tightening torque of the locking bolts (see also "Installation and Removal Instructions")

Dimensions  $H_1$  and  $e$  apply to untightened units.

# STÜWE® Shrink Disc Type HSD Series 23

## Code

- $M_t$**  Maximum transmissible torque of a shrink disc for  $P_{ax} = 0$
- $P_{ax}$**  Maximum transmissible axial load of a shrink disc for  $M_t = 0$
- $M_a$**  Required tightening torque of the locking bolts (see also "Installation and Removal Instructions")

Dimensions  $H_1$  and  $e$  apply to untightened units.

\*Locking bolts: standard DINENISO4014/4017 Grade 12.9, alternative DINENISO4762 Grade 12.9 M16 and upwards with washers: DIN EN ISO 7416

**When ordering please state:** (Type x Ød) e.g. HSD 950 - 81 x 950

# STÜWE® Shrink Disc Type HSD Series 83

## Code

- $M_t$**  Maximum transmissible torque of a shrink disc for  $P_{ax} = 0$
- $P_{ax}$**  Maximum transmissible axial load of a shrink disc for  $M_t = 0$
- $M_a$**  Required tightening torque of the locking bolts (see also "Installation and Removal Instructions")

Dimensions  $H_1$  and  $e$  apply to untightened units.

# STÜWE® Shrink disc Type HSD Rust-free Series 20 - 1.4122

## Code

- $M_t$  Maximum transmissible torque of a shrink disc for  $P_{ax} = 0$
- $P_{ax}$  Maximum transmissible axial load of a shrink disc for  $M_t = 0$
- $M_a$  Required tightening torque of the locking bolts (see also "Installation and Removal Instructions")
- $\mu_w$  The transmissible loads on rust-free materials are calculated using the coefficient of friction  $\mu_w = 0.1$

Dimensions  $H_1$  and  $e$  apply to untightened units.

# STÜWE® Shrink disc Type HSD Rust-free Series 20 - 1.4462

## Code

- $M_t$**  Maximum transmissible torque of a shrink disc for  $P_{ax} = 0$
- $P_{ax}$**  Maximum transmissible axial load of a shrink disc for  $M_t = 0$
- $M_a$**  Required tightening torque of the locking bolts (see also "Installation and Removal Instructions")
- $\mu_w$**  The transmissible loads on rust-free materials are calculated using the coefficient of friction  $\mu_w = 0.1$

Dimensions  $H_1$  and  $e$  apply to untightened units.

# SHRINK DISC TYPE HSD – SPECIAL SOLUTIONS

## STÜWE® Individual solution UHSD

Example: Internal locking frictional connection

# STÜWE® HSD with integrated spacer

Integration of partial solutions into the connection element

# STÜWE® Double-function HSD with Grooves

Connection element and seal

# STÜWE® HSD with External Teeth

Connection element with mating external contour

# STÜWE® HSD with Centring Device

Connection element with centring device on the inner ring

STÜWE®

# SHRINK DISC TYPE SD

# SHRINK DISC TYPE SD – GENERAL INFORMATION

## Application Description

In addition to the two-part HSD series STÜWE® also offers a three-part type SD shrink disc. It is characterized by its slim design while at the same time having a high level of torque transmission. The three-part torque-controlled frictional connection is maintenance-free and dirt-resistant due to its press fit and is very versatile in its use.

## Areas of Use

Driveline  
technology

Steel- &  
rolling mill equipment

Crushing  
equipment

Conveying  
equipment

Agitation &  
mixing equipment

Shipbuilding

# SHRINK DISC TYPE SD – SERIES

Description	Shaft diameter	Transmissible torque	Features
SD 71/72	19 - 760 mm	0.28 - 8375 kNm	High torques

All types may be protected against environmental influences by zinc and nickel coating or by a paint which has an appropriate corrosion protection class. We are able to achieve both desired colours which conform with the RAL colour range and products with lubricants in accordance with NSF H1. More detailed information on this may be found in this catalogue on page 151.

# STÜWE® Shrink Disc Type SD Series 71 | 72

Roughness of all mating surfaces:  
Ra < 3.2 µm

Information on fits:  
Ød: H7/f7  
Ød<sub>w</sub>: H7/h6 (Ød<sub>w</sub> < 160)  
H7/g6 (Ød<sub>w</sub> ≥ 160)

## Code

**M<sub>t</sub>** Maximum transmissible torque of a shrink disc for P<sub>ax</sub> = 0

**P<sub>ax</sub>** Maximum transmissible axial load of a shrink disc for M<sub>t</sub> = 0

**M<sub>a</sub>** Required tightening torque of the locking bolts (see also "Installation and Removal Instructions")

Dimensions H and e apply to untightened units.

# SHRINK DISC TYPE SD – SPECIAL SOLUTIONS

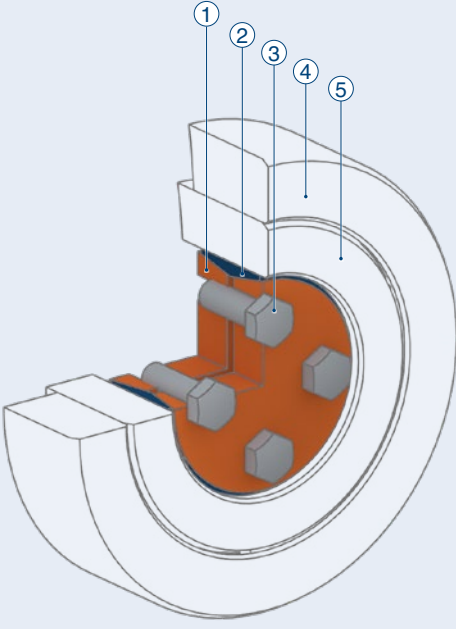

## STÜWE® SD with Protection

Connection element with a protrusion on the outer ring

# STÜWE® Individual solution USD

Internal locking frictional connection

**Benefits**

- Less components
- Outside the flow of loads
- Alternative to UHSD
- Possible compensation of varying fitting tolerance

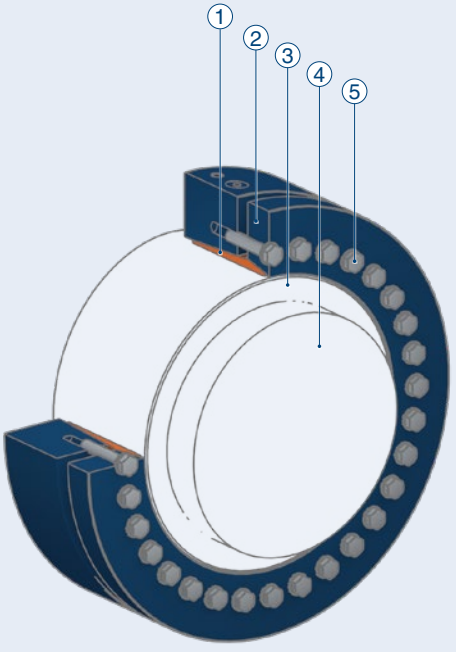

① Inner ring\*  
② Outer ring\*  
③ Locking bolts\* including washer as necessary\*  
④ Hub  
⑤ Shaft

\*Included with the delivery

# STÜWE® Individual solution SDB

Connection element for particularly compact installation spaces

**Benefits**

- Reduced width in non-tensioned condition
- Smaller protrusion on one side
- Compact design for limited width

① Inner ring\*  
② Outer ring\*  
③ Hub  
④ Shaft  
⑤ Locking bolts\* including washer as necessary\*

\*Included with the delivery

STÜWE®

# SHRINK DISC TYPE HYD – HYDRAULIC

# SHRINK DISC TYPE HYD – GENERAL INFORMATION

## Application Description

The hydraulic shrink disc type HYD is based on the same principle as the type HSD mechanical shrink disc. As a result of the hydraulic tensioning only a fraction of the time is required for installation and removal compared with the mechanical type HSD.

## Areas of Use

Driveline  
technology

Measurement &  
testing equipment

Crushing  
equipment

Conveying  
equipment

Agitation &  
mixing equipment

Wind turbines

# SHRINK DISC TYPE HYD – SERIES

Description	Shaft diameter	Transmissible torque	Features
HYD 12	90 - 680 mm	16 - 6211 kNm	average torques, compact series
HYD 22	50 - 860 mm	2.7 - 12349 kNm	high torques

All types may be protected against environmental influences by zinc and nickel coating or by a paint which has an appropriate corrosion protection class. We are able to achieve both desired colours which conform with the RAL colour range and products with lubricants in accordance with NSF H1. More detailed information on this may be found in this catalogue on page 151.

# STÜWE® Shrink Disc Type HYD Series 12

## Code

- $M_t$**  Maximum transmissible torque of a shrink disc for  $P_{ax} = 0$
- $P_{ax}$**  Maximum transmissible axial load of a shrink disc for  $M_t = 0$
- HP** High pressure is a maximum of 3800 bar
- T** Clamping pressure is a maximum of 450 bar

You have not found what you are looking for in our comprehensive range of standard-products?  
We will be happy to promptly prepare any form of custom-made product and development innovation  
even using special materials such as 1.3974. Please feel free to contact us.

# SHRINK DISC TYPE HYD – SPECIAL SOLUTIONS

## STÜWE® HYD for Test Beds

Connection element for extremely high numbers of cycles

**Benefits**

- Smaller installation space
- Greater freedom for design
- Outside the flow of loads

① Inner ring\*  
 ② Outer ring\*  
 ③ Hub  
 ④ Shaft  
 ⑤ Support ring\*  
 ⑥ Nut\*

\*Included with the delivery

# STÜWE® Individual solution HYSD

Hydraulic connection element for particularly compact installation spaces

## Benefits

- Less components
- Easier and safer installation

- ① Inner ring\*
- ② Nut\*
- ③ Outer ring\*
- ④ Shaft
- ⑤ Hub

\*Included with the delivery

STÜWE®

# SHRINK DISC TYPE SDG AND SDGH

# SHRINK DISC TYPE SDG AND SDGH – GENERAL INFORMATION

## Application Description

The divided type SDG shrink discs are four-part shrink discs which are used for the space-saving shrinking of disc-shaped components such as gearwheels, pulleys or cams. This is frequently used where particularly low space for installation exists. If only a single-sided connection is needed, STÜWE® offers the divided type SDGH shrink disc.

## Areas of Use

Driveline technology

Steel- & rolling mill equipment

Crushing equipment

Conveying equipment

Pulley

Gearbox

# SHRINK DISC TYPE SDG AND SDGH – SERIES

Description	Shaft diameter	Transmissible torque	Features
SDG 71/72	19 - 470 mm	0.26 - 2386 kNm	High torques
SDG 91	95 - 320 mm	23 - 919 kNm	Extremely high torques

All types may be protected against environmental influences by zinc and nickel coating or by a paint which has an appropriate corrosion protection class. We are able to achieve both desired colours which conform with the RAL colour range and products with lubricants in accordance with NSF H1. More detailed information on this may be found in this catalogue on page 151.

# STÜWE® Shrink Disc Type SDG Series 71 | 72

## Code

$M_t$  Maximum transmissible torque of a shrink disc for  $P_{ax} = 0$

$P_{ax}$  Maximum transmissible axial load of a shrink disc for  $M_t = 0$

$M_a$  Required tightening torque of the locking bolts (see also "Installation and Removal Instructions")

Dimensions  $H_1$  and  $e$  apply to untightened units.

Further sizes on request, subject to technical changes.

\*Locking bolts: standard DINENISO4014/4017 Grade 10.9, alternative DINENISO4762 Grade 10.9  
M16 and upwards with washers: DIN EN ISO 7416

**When ordering please state:** (Type x Ød) Dimension X, e.g. SDG 390 - 91 x 390 x=120 mm

# STÜWE® Shrink Disc Type SDGH Series 71 | 72

## Code

- $M_t$  Maximum transmissible torque of a shrink disc for  $P_{ax} = 0$
- $P_{ax}$  Maximum transmissible axial load of a shrink disc for  $M_t = 0$
- $M_a$  Required tightening torque of the locking bolts (see also "Installation and Removal Instructions")

Dimensions  $H_1$  and  $e$  apply to untightened units.

even using special materials such as 1.3974. Please feel free to contact us.**

# SHRINK DISC TYPE SDG AND SDGH – SPECIAL SOLUTIONS

## STÜWE® Complete Solution ZSDG

Example: Complete gearwheel including locking elements

**Benefits**

- Less components
- Supply of a finished component

- ① Outer ring\*
- ② Locking bolts\* including washer as necessary\*
- ③ Gearwheel with integrated inner ring\*
- ④ Outer ring\*

\*Included with the delivery

STÜWE®

# EXTERNAL LOCKING UNIT TYPE AS

# EXTERNAL LOCKING UNIT TYPE AS – GENERAL INFORMATION

## Application Description

Type AS external locking units are used for the fixing of removable attachments such as brake discs, sheaves or pulleys to all forms of shaft. This type of fixture is characterized in particular by its easy and free positioning, non-destructive installation and removal and high transmissible loads. Differentiation is made in the standard delivery programme between the following four models so that an optimum variance exists for the achievement of your ideal connection.

## Areas of Use

# EXTERNAL LOCKING UNIT TYPE AS – SERIES

**Model A:**  
Thread in the outer ring

**Model AB:**  
Thread in the outer ring  
and centring device

**Model C:**  
Thread in the  
attachment

**Model BC:**  
Thread in the attachment  
and centring device

Description	Shaft diameter	Transmissible torque	Features
12	9 - 100 mm	0.02 - 15.8 kNm	Average torques; without bending moment
22	11 - 440 mm	0.05 - 426 kNm	High torques + bending moment
23	40 - 440 mm	3.3 - 562 kNm	Extremely high torques + bending moment

- ① Attachment (for example, a sheave)
- ② Inner ring\*
- ③ Outer ring\*
- ④ Shaft
- ⑤ Locking bolts  
including washer as necessary

\*Included with the delivery

All types may be protected against environmental influences by zinc and nickel coating or by a paint which has an appropriate corrosion protection class. We are able to achieve both desired colours which conform with the RAL colour range and products with lubricants in accordance with NSF H1. More detailed information on this may be found in this catalogue on page 151.

# STÜWE® External Locking Unit Type AS Series 12

## Code

- $M_t$**  Maximum transmissible torque of an external locking unit for  $P_{ax} = 0$
- $M_a$**  Required tightening torque of the locking bolts (see also "Installation and Removal Instructions")

### Information on fits:

$\text{Ø}d_w$ : h9  
 $\text{Ø}d_2$ : H7/g6

**all models:**  
 $S > 1.4 \times \text{Bolts-Ø}$

**Roughness of all mating surfaces:**  
 $Ra < 3.2 \mu\text{m}$

For the transmission of torque only. For the transmission of both torque and bending moments select series 22 or 23.

# EXTERNAL LOCKING UNIT TYPE AS – SPECIAL SOLUTIONS

## STÜWE® Individual solution DAS

double AS for disc-shaped attachments with very heavy loads

### Benefits

- Higher transmissible loads
- More accurate positioning of the disc

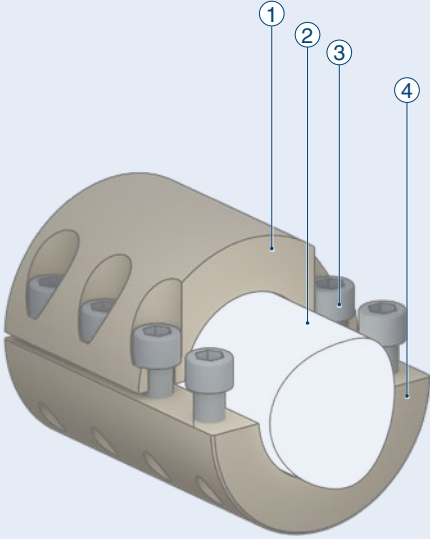

- ① Inner ring\*
- ② Outer ring\*
- ③ Locking bolts\* including washer as necessary\*
- ④ Disc-shaped attachment (e.g. a brake disc)
- ⑤ Shaft

\*Included with the delivery

# STÜWE® Clamping Element GAS

divided AS for the transmission of axial loads

- Benefits**
  - Radial installation and removal
  - Space-saving installation
  - Unattached to other components

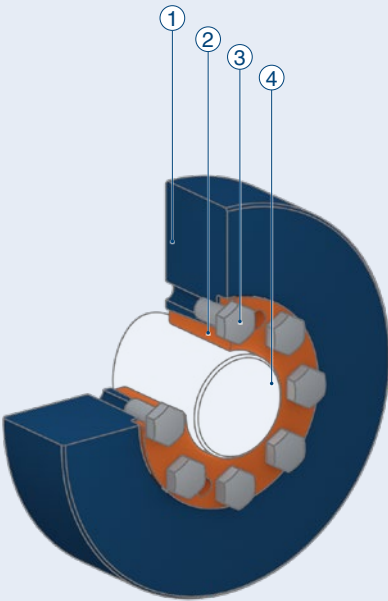

- ① Upper section\*
- ② Shaft
- ③ Locking bolts\*
- ④ Lower section\*

\*Included with the delivery

# STÜWE® AS as an Oscillating Weight

clamped swinging element as an energy store

- Benefits**
  - Design based on mass inertia
  - Individual customizing

- ① Outer ring\*
- ② Inner ring\*
- ③ Locking bolts\* including washer as necessary\*
- ④ Shaft

\*Included with the delivery

# STÜWE® Adapter Flange AD

Adaption of clamping and bolt connections

## Benefits

- Less components
- Even shafts of unequal size can be connected
- Bridging of wide spaces
- Clamping element integrated

- ① Shaft
- ② Outer ring\*
- ③ Locking bolts\* including washer as necessary\*
- ④ Inner ring\*

\*Included with the delivery

STÜWE®

# SHAFT COUPLING TYPE WK AND WKL

# SHAFT COUPLING TYPE WK AND WKL – GENERAL INFORMATION

## Application Description

The shaft couplings WK and WKL are suited in all cases where a secure, fixed connection between two free shaft ends with little effort is demanded. The couplings are provided for shafts with identical or differing shaft diameters and fitting tolerances. Type WKL shaft couplings are used for larger axial distances between the shaft ends. Type WK shaft couplings are suitable for smaller axial distances.

## Areas of Use

Driveline  
technology

Steel- &  
rolling mill equipment

Crushing  
equipment

Conveying  
equipment

Agitation &  
mixing equipment

Shipbuilding

# SHAFT COUPLING TYPE WK AND WKL – SERIES

Description	Shaft diameter	Transmissible torque	Features
WK 12	9 - 750 mm	0.04 - 7116 kNm	The maximum distance of the shaft ends is 0.1 x L.
WKL 12	9 - 750 mm	0.04 - 7116 kNm	Long version

All types may be protected against environmental influences by zinc and nickel coating or by a paint which has an appropriate corrosion protection class. We are able to achieve both desired colours which conform with the RAL colour range and products with lubricants in accordance with NSF H1. More detailed information on this may be found in this catalogue on page 151.

# STÜWE® Shaft Coupling TYPE WK Series 12

## Code

- $M_t$  Maximum transmissible torque of a shrink disc for  $P_{ax} = 0$
- $P_{ax}$  Maximum transmissible axial load of a shrink disc for  $M_t = 0$
- $M_a$  Required tightening torque of the locking bolts (see also "Installation and Removal Instructions")

# SHAFT COUPLING TYPE WK AND WKL – SPECIAL SOLUTIONS

## STÜWE® System Solution W Coupling

Locking unit for the bridging of maximum distances between shafts

# STÜWE® Individual solution WKD

Compact shaft coupling for small distances between shafts

## Benefits

- Less components
- Short distances between shafts

- ① Outer ring\*
- ② Inner ring\*
- ③ Shaft
- ④ Locking bolts\* including washer as necessary\*

\*Included with the delivery

# STÜWE® Hydraulic Shaft Coupling WKHYD

Hydraulic shaft coupling for small distances between shafts

## Benefits

- Quicker installation

- ① Inner ring\*
- ② Outer ring\*
- ③ Shaft
- ④ Support ring\*
- ⑤ Nut\*

\*Included with the delivery

# STÜWE® WKL with Spline Shaft Teeth

Locking element for the adaption of a splined shaft with smooth shaft (e.g. in hydraulic motors)

## Benefits

- Minimization of wear to the interlocking connection
- Increasing of the service life of the plant shaft

- ① Outer ring\*
- ② Locking bolts\* including washer as necessary\*
- ③ Inner ring\*

\*Included with the delivery

# STÜWE® Hydraulic Shaft Coupling WKLHYD

Hydraulic shaft coupling for large distances between shafts

## Benefits

- Quicker installation

- ① Shaft
- ② Nut\*
- ③ Outer ring\*
- ④ Inner ring\*
- ⑤ Support ring\*

\*Included with the delivery

**STÜWE®**

# **FLANGE COUPLING TYPE FKH, FKHA & FKD – MECHANICAL**

# FLANGE COUPLING TYPE FKH, FKHA & FKD – GENERAL INFORMATION

## Application Description

Flange couplings are used for the connection of shafts with the aid of a flange. The type FKH flange coupling consists of two flanged halves and thus forms a rigid connection between two shafts. If only one flanged half is needed, STÜWE® offers the type FKHA and FKD flange coupling. The FKD flange coupling is characterized by the tapered design of its flange which enables the saving of fitting tolerance and a reduction in cost and weight thanks to the elimination of one component. All flange couplings provide the possibility for the compensation of length tolerances in the system due to free positioning. Extremely high static and dynamic loads can also be safely transmitted.

## Areas of Use

Driveline  
technology

Steel- &  
rolling mill equipment

Crushing  
equipment

Conveying  
equipment

Shipbuilding

Wind turbines

# FLANGE COUPLING TYPE FKH, FKHA & FKD – SERIES

Description	Shaft diameter	Transmissible torque	Features
FKH	70 - 350 mm	6 - 911 kNm	Complete flange coupling
FKHA	95 - 320 mm	17 - 853 kNm	Flange coupling half
FKD 4	90 - 350 mm	20 - 729 kNm	Flange coupling half, high torques and speed and extremely high bending moments
FKD 6	90 - 350 mm	22 - 911 kNm	Flange coupling half, extremely high torques and speed and high bending moments

All types may be protected against environmental influences by zinc and nickel coating or by a paint which has an appropriate corrosion protection class. We are able to achieve both desired colours which conform with the RAL colour range and products with lubricants in accordance with NSF H1. More detailed information on this may be found in this catalogue on page 151.

# STÜWE® Flange Coupling Type FKH

## Code

- $M_t$  Maximum transmissible torque of a flange coupling for  $P_{ax} = 0$   
 $M_a$  Maximum tightening torque of the locking bolts (see also "Installation and Removal Instructions")  
 $M_{a,FL}$  Tightening torque of the flange connecting bolts

\*Grade 10.9 \*\*Hole diameter can be freely chosen within given limitations.

\*\*\*Locking bolts for Model A: DIN EN ISO 4014/4017 Grade 10.9, Model B: DIN EN ISO 4762 Grade 10.9

**When ordering please state:** (Type x Ød<sub>w</sub> x Model), e.g. FKH 630 - 250 x 240 x A

# STÜWE® Flange Coupling Type FKHA

## Code

- $M_t$  Maximum transmissible torque of a flange coupling for  $P_{ax} = 0$
- $M_a$  Maximum tightening torque of the locking bolts (see also "Installation and Removal Instructions")
- $M_aFL$  Tightening torque of the flange connecting bolts

Dimensions N, b, c, t plus quantity and size of flange bolts depend on the counterflange and can be changed if necessary. Please state the desired dimensions where they vary from the value in the table.

# FLANGE COUPLING TYPE FKH, FKHA & FKD – SPECIAL SOLUTIONS

## STÜWE® Flange Coupling FK with SD

Connection element with three-part shrink disc for compact installation spaces

### Benefits

- Low space requirement
- Free positioning
- Compensation of length tolerance variations possible

- ① Flange\*
- ② Inner ring\*
- ③ Locking bolts\* including washer as necessary\*
- ④ Shaft
- ⑤ Outer ring\*

\*Included with the delivery

# STÜWE® Flange Coupling Type FKD Series 4

								399	168000	

Please note when selecting flange couplings that the transmission values given in the table are reference values for orientation.

**Attention:**

An overlapping of speed, bending moment and torque leads to a reduction in the transmissible torque.

Should several loads of the size of those limits given in the table be applied at the same time on the shrink disc in your case, please feel free to contact our Design department at [engineering@stuewe.de](mailto:engineering@stuewe.de).

Please note when selecting flange couplings that the transmission values given in the table are reference values for orientation.

**Attention:**

An overlapping of speed, bending moment and torque leads to a reduction in the transmissible torque.

Should several loads of the size of those limits given in the table be applied at the same time on the shrink disc in your case, please feel free to contact our Design department at [engineering@stuewe.de](mailto:engineering@stuewe.de).

STÜWE®

# FLANGE COUPLING TYPE FKHYD – HYDRAULIC

# FLANGE COUPLING TYPE FKHYD – GENERAL INFORMATION

## Application Description

Flange couplings are used for the connection of shafts with the aid of a flange. The FKHYD is a hydraulic flange coupling half which combines the benefits of all the flange couplings to be found in the STÜWE® range (length tolerances may be compensated by free positioning, transmission of extremely high static and dynamic loads) with a minimized installation time. The reduction in the installation time is made possible by the hydraulic locking principle of the coupling in which bolts which are subject to bending moments are eliminated.

## Areas of Use

Driveline  
technology

Steel- &  
rolling mill equipment

Measurement &  
testing equipment

Conveying  
equipment

Shipbuilding

Wind turbines

# FLANGE COUPLING TYPE FKHYD – SERIES

Description	Shaft diameter	Transmissible torque	Features
FKHYD	120 - 440 mm	40 - 2300 kNm	Transmission of extremely high torques hydraulic design

All types may be protected against environmental influences by zinc and nickel coating or by a paint which has an appropriate corrosion protection class. We are able to achieve both desired colours which conform with the RAL colour range and products with lubricants in accordance with NSF H1. More detailed information on this may be found in this catalogue on page 151.

# STÜWE® Flange Coupling Type FKHYD

## Code

$M_t$  Maximum transmissible torque of a flange coupling for  $P_{ax} = 0$

Dimensions N, b, c, t plus quantity and size of flange bolts depend on the counterflange.

When ordering please state Flanges can also be supplied counterbored for internal spigot location.

# CARDAN SHAFT CONNECTING FLANGE TYPE GF

# CARDAN SHAFT CONNECTING FLANGE TYPE GF – GENERAL INFORMATION

## Application Description

The type GF cardan shaft connecting flange is suited for the connection of standard cardan shafts to cylindrical shaft ends. It is characterized by optimal power transmission, easy installation and safe connection in cases of varying or jerky torques. Differentiation is made in the standard delivery programme between three series (21, 22, 23) each with two models so that an optimum variance exists for the achievement of your ideal connection.

## Areas of Use

# CARDAN SHAFT CONNECTING FLANGE TYPE GF – SERIES

Description	Shaft diameter	Transmissible torque	Features
21	20 - 85 mm	0.12 - 9.52 kNm	Flange bolts are also used for tensioning
22	65 - 220 mm	7 - 229 kNm	Primarily for the connection of small shaft end diameters with large cardan shaft flanges
23	90 - 300 mm	13 - 507 kNm	Primarily for the connection of large shaft end diameters

All types may be protected against environmental influences by zinc and nickel coating or by a paint which has an appropriate corrosion protection class. We are able to achieve both desired colours which conform with the RAL colour range and products with lubricants in accordance with NSF H1. More detailed information on this may be found in this catalogue on page 151.

# STÜWE® Cardan Shaft Coupling Type GF – Series 21

## Code

- $M_t$  Maximum transmissible torque of a connecting flange for  $P_{ax} = 0$   
 $P_{ax}$  Maximum transmissible axial load of a connecting flange for  $M_t = 0$   
 $M_a$  Maximum tightening torque of the locking bolts (see also "Installation and Removal Instructions")

# INTERNAL LOCKING UNIT TYPE IS

# INTERNAL LOCKING UNIT TYPE IS – GENERAL INFORMATION

## Application Description

Internal locking units are examples of shaft-hub connections. They achieve a frictional and backlash-free connection between a shaft and a hub hole. Due to the locking unit which grips from the inside no additional installation space is taken up by external components outside the hub and slim design is thus permitted. Each type offers the following benefits as a result: It has self-locking taper angles, is self-centring and thus achieves an increase in concentricity through pre-centring.

## Areas of Use

Driveline  
technology

Crushing  
equipment

Steel- &  
rolling mill equipment

Agitation &  
mixing equipment

Conveying  
equipment

# INTERNAL LOCKING UNIT TYPE IS – SERIES

Description	Shaft diameter	Transmissible torques*	Features
IS1	20 - 500 mm	0.3 - 880 kNm	Small installation space Sliding of the hub when tensioning
ISN1	20 - 500 mm	0.3 - 723 kNm	Axial fixing No sliding of the hub when tensioning
IS2	70 - 600 mm	7.3 - 1258.5 kNm	For high torques, no sliding of the hub when tensioning
IS3	45 - 600 mm	3.1 - 1458.6 kNm	For extremely high torques, no sliding of the hub when tensioning
IS4	70 - 600 mm	0.9 - 1266 kNm	For high torques, no sliding of the hub when tensioning
IS4.1	100 - 600 mm	11 - 903 kNm	Reduced surface pressure Especially suited for conveyor pulleys No sliding of the hub when tensioning

\*all torques are based on an assumed coefficient of friction of 0.12

# STÜWE® Internal locking unit Type IS – Series IS 1

## Code

# STÜWE® Internal locking unit Type IS – Series ISN 1

## Code

- $M_t$  Maximum transmissible torque of a locking unit for  $P_{ax} = 0$
- $P_{ax}$  Maximum transmissible axial load of a locking unit for  $M_t = 0$
- $M_a$  Required tightening torque of the locking bolts
- $P_w$  Surface pressure between locking unit and shaft
- $P_n$  Surface pressure between locking unit and hub

Dimensions  $L_3$  and  $L_4$  apply to untightened units.

Further sizes on request, subject to technical changes.

\*Locking bolts DIN EN ISO 4762: Grade 12.9

**When ordering please state:** (Type x Ød x ØD) e.g. IS 4.1 420 x 515

**You have not found what you are looking for in our comprehensive range of standard-products?  
We will be happy to promptly prepare any form of custom-made product and development innovation  
even using special materials such as 1.3974. Please feel free to contact us.**

# INTERNAL LOCKING UNIT TYPE IS – SPECIAL SOLUTIONS

## STÜWE® Individual locking unit

Four-part internal locking unit for small installation spaces

STÜWE®

# SERVICES

## High Performance

In addition to our standard supply range, we offer a comprehensive selection of special solutions. We use modern design methods to ensure the consistent ongoing development of our product range and build customized special solutions based on your requirements.

Whether dealing with new systems or the integration of a locking element into a previously existing system, both our specialist engineers and our industrial representatives will be ready to assist you at any time with your wishes, suggestions and adjustments. We will be happy to work together with you on individual challenges regarding material, painting, coating or also special lubrication with the aid of our extensive expertise.

## Material

In addition to the standard use of heat-treated steel, we are also capable of designing and manufacturing frictional connections out of special materials such as 1.4501 and many other alloys.

## Painting and Coating

Thanks to our own in-house paint shop, we are capable of achieving a broad range of paint and coating options for you. All shrink discs may be painted using paints from the RAL colour spectrum and, if desired, with an appropriate corrosion protection class in accordance with DIN EN ISO 12944. In order to ensure the corrosion protection of the frictional connections, all shrink discs may also be provided with coatings such as nickel or zinc. Further coating processes are possible after consultation.

## Lubrication

In order to generate optimum coefficients of friction, the lubricants used on our components are based as standard on mineral oils. As an alternative to the standard we offer a modification using NSF H1 classified lubricants that are permitted for use in applications where product contact may not be fully excluded, for example in the foodstuff and nutritional and pharmaceutical industries.

## Product Certification

Our experienced development team applies its technical and business standards in a skilled and efficient manner while taking into account quality features and such items as the demands of certification organisations. For this purpose we collaborate closely with various certification organisations from the maritime industry and the wind power sector.

## Job Order Production and Measurement Equipment

We have a comprehensive range of machinery and are capable of manufacturing rotationally symmetric components with a diameter of 20 mm - 2200 mm and a height of 1400 mm with a maximum component weight of 10t. In addition, we have an extensive range of 3D measurement equipment which enable us to directly check the dimensional accuracy of manufactured components.
